Art Unit: 1651

The communication is in response to a preliminary amendment of 2/27/02 that was not entered when the office action of 9/30/03 issued. The preliminary amendment amended the specification, canceled claims 1-33 and added new claims 34-70. New claims 34-70 are restrictable, and the following restriction requirement replaces the previous Office action of 9/30/03 directed to the claims canceled by the preliminary amendment.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 34-48, 54, 57-60, 69 and 70, drawn to a matrix, device and method requiring bone in combination with tissue for forming a skeletal joint or for repair of a skeletal joint defect, classified in class 424, subclass 423.
- II. Claims 49-53, 55-60 and 70, drawn to an implantation device and method for forming cartilage replacement tissue or replacement non-mineralized tissue and requiring a matrix that allows for attachment of infiltrating cells, classified in class 424, subclass 93.7.
- III. Claims 61-68, drawn to a device requiring a matrix having an articulating surface and plural distinct

Art Unit: 1651

tissues for forming an articulating skeletal joint or for forming non-mineralized tissues in an articulating skeletal joint, classified in class 424, subclass 426.

The inventions are distinct, each from the other because of the following reasons: each invention requires structure and/or components such that each can be performed without the other. The matrix, device and method of invention of I require bone in combination with cartilage tissue or non-mineralized tissue so a skeletal joint can be formed or replaced, and is not required by inventions II and III. The device and method of invention II require replacing cartilage tissue or non-mineralized tissue to repair a tissue defect using a matrix that allows attachment of infiltrating cells, and is not required by inventions I and III. Invention III requires a device for forming an articulating skeletal joint or forming non-mineralized tissues in an articulating skeletal joint using a matrix having an articulating surface and plural distinct tissues, and is not required by inventions I and II.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 1651

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

The examiner has required restriction between product and process claims. Where applicant elects claims directed to the product, and a product claim is subsequently found allowable, withdrawn process claims that depend from or otherwise include all the limitations of the allowable product claim will be rejoined in accordance with the provisions of MPEP § 821.04. **Process claims that depend from or otherwise include all the limitations of the patentable product** will be entered as a matter of right if the amendment is presented prior to final rejection or allowance, whichever is earlier. Amendments submitted after final rejection are governed by 37 CFR 1.116; amendments submitted after allowance are governed by 37 CFR 1.312.

In the event of rejoinder, the requirement for restriction between the product claims and the rejoined process claims will be withdrawn, and the rejoined process claims will be fully examined for patentability in accordance with 37 CFR 1.104. Thus, to be allowable, the rejoined claims must meet all criteria for patentability including the requirements of 35 U.S.C. 101, 102, 103, and 112. Until an elected product claim is found allowable, an otherwise proper restriction requirement between product claims and process claims may be maintained. Withdrawn process claims that are not commensurate in scope with

Art Unit: 1651

an allowed product claim will not be rejoined. See "Guidance on Treatment of Product and Process Claims in light of In re Ochiai, In re Brouwer and 35 U.S.C. § 103(b)," 1184 O.G. 86 (March 26, 1996). Additionally, in order to retain the right to rejoinder in accordance with the above policy, Applicant is advised that the process claims should be amended during prosecution either to maintain dependency on the product claims or to otherwise include the limitations of the product claims. **Failure to do so may result in a loss of the right to rejoinder.** Further, note that the prohibition against double patenting rejections of 35 U.S.C. 121 does not apply where the restriction requirement is withdrawn by the examiner before the patent issues. See MPEP § 804.01.
